## **Small Ruminant Vaccination Recommendations**

Sheep and goats require only minimal vaccination under most circumstances. Vaccination using a clostridium perfringens C&D + tetanus toxoid vaccine or 8-way clostridial vaccine + tetanus (Covexin 8) in kids/lambs and adults is recommended using the following timeline as an example.

### **Vaccines:**

6-8 weeks of age: Covexin 8

4 weeks later: Covexin 8

6 months of age: Covexin 8

Annually as adults: Covexin 8

### **General Guidelines:**

Diseases such as pneumonia, abortion and foot rot may necessitate herd specific vaccination protocols. The above example is sufficient for most herds.

Let us help you determine what vaccination plan fits best for your individual horse.
